

Welcome back from summer holidays! Now we are looking towards the last 5 months of 2020. Although COVID-19 is still affecting the world we will always offer our 5-star service to our customers. In this issue you will find some information about our excellent temperature sensor RT-BCQ with or without display for easy and fast calibration.

If you need more information, please don't hesitate to contact us

## Temperature sensor RT-BCQ-D—for easy calibration

In many applications you need to calibrate your temperature sensor in a specific interval which is a time-consuming process.

Many times, you need to turn off the process, empty the system and when you are processing food or pharma you need to do CIP before starting the production again. All this cost's a lot of time and money. Until now...

We have developed a temperature sensor that you can change or do calibration very fast without turning off the process.

Using a bayonet coupling you turn the head and take out the insert to change or do calibration, just disconnect the M12 electrical connection and you're done.

This you can do during process, without emptying the process system and contaminate the product.

You can have this sensor with various process connections like Tri-Clamp or other sanitary connections.

You can choose to get this sensor with or without display.

# Transmitters - for all applications

We have a wide range of temperature transmitters that fit's in all applications.

Choose between head-mounted or DIN-rail mounted.

Standard output signal 4-20mA, HART 5 -7, Profibus PA/ Foundation Fieldbus.

Now also Bluetooth communication between PR4000 and 9000 series available for easy programming, live process & error monitoring, data & event logging. More information? Click [here](#).

## More knowledge?

To measure temperature correct you need to take care of many parameters like materials, Pt100 classes, Thermocouple types etc.

On our webpage you find a lot of knowledge to help you make a correct choice.

If you need any help you are always welcome to contact us.

Press each picture for more information about the sensor

## Contakt:

If you would like more information or a demonstration of our products, please contact Ole at +45 2124 5472, [oem@kp-as.com](mailto:oem@kp-as.com) or Stefan at +46 725 266 638, [stg@kp-as.com](mailto:stg@kp-as.com).

We offer to have meetings in person, but also digital meetings on Skype, Teams or your preferred platform in accordance with your needs and wishes.

You can also contact our main office in Taastrup at +45 3976 0203 or [sales@kp-as.com](mailto:sales@kp-as.com).
